## Biology

| Quest | tion 1 (52)  | Exan<br>use |     |
|-------|--|-------------|-----|
| (a)   | The diagram shows some of the structures in human skin. The skin has many functions. One of them is excretion. Skin excretes sweat. Name two substances excreted in sweat.  Substance 1  Substance 2 | (1)         | (2) |
| (b)   | Nerves carry electrical messages around our bodies. Nerves have motor functions and sensory functions. Explain the <i>underlined terms</i> .  Motor function   |             |     |
|       | Sensory function   |             |     |
| (c)   | Different types of joints hold together the bones of our skeleton. Name the <i>type of joint</i> labelled in the diagram of the human skull.  Name   |             |     |
|       | How does this type of joint <i>differ</i> from other types of joints found in our bodies?  |             |     |
|       | Difference   |             |     |
| (d)   | The diagram is of the human eye.  Name the <i>part</i> labelled <b>A</b> .  Ciliary muscle   |             |     |
|       | What <i>function</i> has the ciliary muscle?   |             |     |
|       | Function   |             | ĺ   |

| (e) | The photograph is of James Dewey Watson who together with Francis Crick published the molecular structure of DNA in 1953. Where is DNA <i>located</i> in cells?  | For Examiner use only  (1) (2) |
|-----|--|--------------------------------|
|     | Location   | <u> </u>                       |
|     | Name a second <i>substance</i> associated with DNA.  |                                |
|     | Second substance   |                                |
| (f) | The diagram shows a pooter. It is used, when studying a habitat to collect small animals e.g. insects, for identification. Describe <i>how to use a pooter</i> .   |                                |
| (g) | The photograph shows a stage in the industrial production of cheese. This is an example of the use of biotechnology in industry. Give <b>two</b> other <i>examples</i> of the use of biotechnology in industry or medicine.  1 2 |                                |
| (h) | Name the principal food type (nutrient), which is present in all of the foods shown.   |                                |
|     | Name Butter Cheese Cooking oil   |                                |
|     | Describe a <i>test</i> to show the <i>presence of the food type</i> that you have named in food samples.   |                                |
|     | Test   | _                              |
|     |  |                                |
|     |  | _                              |

| Question 2 |   |             |                 | (39) | For<br>Examiner<br>use only |
|------------|---|-------------|-----------------|------|-----------------------------|
|            | diagram shows a young seedling grown from a ninated seed.   |             | Air             | )    | (1) (2)                     |
| <i>(i)</i> | List <b>three</b> <i>conditions necessary</i> for seeds to germinate.   | (9)         | Soil            |      |                             |
|            | Condition 1   | _           |                 | (    |                             |
|            | Condition 2   |             |                 | \    |                             |
|            | Condition 3   | _           | V               |      |                             |
|            | Describe, using labelled diagrams in the box p to show that any <b>two</b> of the <i>conditions</i> that yo for seeds to germinate. The investigation mus | u have give | en are required | (12) |                             |

| (b) |            | e diagram shows the human digestive tem.  | For Examine use only |  |
|-----|------------|---|----------------------|--|
|     | <i>(i)</i> | Give a <i>digestive function</i> of organ A.  (3)  Function  Small  |                      |  |
|     | (ii)       | In the small intestine starch is broken down to maltose by amylase.   |                      |  |
|     |            | Identify the <i>enzyme</i> , and the <i>substrate</i> named in the reaction above.  (6)                                     |                      |  |
|     |            | Enzyme  |                      |  |
|     |            | Substrate   |                      |  |
|     | (iii)      | Give a <i>function</i> of the small intestine other than digestion. (3)   |                      |  |
|     |            | Function  |                      |  |
|     | (iv)       | Describe a simple laboratory experiment to show the <i>release</i> of <i>chemical energy</i> from food as <i>heat</i> . (6) |                      |  |
|     |            |   |                      |  |
|     |            |   |                      |  |
|     |            |   |                      |  |
|     |            |   |                      |  |
|     |            |   |                      |  |

| Quest | Question 3 (39)     |  |         |  |  |  |
|-------|---------------------|--|---------|--|--|--|
|       |                     | imals and human activity all have important roles in conserving the living ent on the planet.  | (1) (2) |  |  |  |
| (a)   | <i>(i)</i>          | Complete the following <i>word equation</i> for aerobic respiration. (6)   |         |  |  |  |
|       |                     | Glucose (Food) +   |         |  |  |  |
|       |                     | Energy + + Water   |         |  |  |  |
|       | (ii)                | State how you would show the presence of <b>one</b> of the <i>products</i> of aerobic respiration by means of a <i>chemical test</i> . (9)                               |         |  |  |  |
|       |                     |  |         |  |  |  |
|       |                     |  |         |  |  |  |
|       |                     |  |         |  |  |  |
| (b)   | in w<br>pond<br>and | dweed is a green plant that lives ater. In the presence of light dweed undergoes photosynthesis a gas is produced as one of the fucts. Name the <i>gas</i> produced. (3) |         |  |  |  |
|       | Nan                 | ne of gasWater   |         |  |  |  |
|       | take                | pondweed, and all green plants, in and use another gas, from their ronment during photosynthesis. (3)  |         |  |  |  |
|       | Nan                 | ne of gas used   |         |  |  |  |
|       | How                 | might the <i>rate of production</i> of bubbles, by the pondweed, be increased?   |         |  |  |  |
|       | Hov                 | $\mathbf{v}$ ?   |         |  |  |  |

| is cubeen  | increase in carbon dioxide concentration in the Earth's atmosphere arrently causing concern. The <i>use of fossil fuels</i> and <i>deforestation</i> have a identified as major contributors to this increase in carbon dioxide centration. The graph shows a continual increase in the carbon dioxide centration for the last fifty years. The data was collected at a site in Europe.  |
|------------|--|
|            | Atmospheric Carbon Dioxide   |
|            | Atmospheric Carbon Dioxide 370 gdd 370 360 350 350 approximately 370 gdd 370 g |
| <i>(i)</i> | Explain how <i>either</i> the <b>use of fossil fuels</b> <u>or</u> <b>deforestation</b> could have contributed to the increase in atmospheric carbon dioxide. (3)  Explain   |
| (ii)       | Suggest <b>one</b> possible <i>effect</i> of continued increase in carbon dioxide concentration in the Earth's atmosphere. (3)   |
|            | Effect   |
| is an      | ugh there is an overall increase in carbon dioxide concentration there annual <i>rise and fall</i> in carbon dioxide concentration as shown in the box in diagram.   |
| (iii)      | Suggest <b>one</b> <i>reason</i> why the carbon dioxide concentration decreases between April and October each year. (3)   |
|            | Reason   |
| (iv)       | How could the reason that you have given in ( <i>iii</i> ) be used in a <i>practical</i> way to slow down and even reverse the overall increase in carbon dioxide levels in the atmosphere? (6)  |
